Popup by Smartarget

After the first setup, we recommend to manage the app from your Smartarget Dashboard: https://app.smartarget.online

Can I link to external pages?
Yes, you can link to any page you want, even if it's located on a different subdomain/domain.

I've installed it but I don't see the Popup on my website
Check your website using incognito.
If you configured the popup to be shown only every X days per user and you already dismissed it on your website - you will see it next time based on the frequency you picked. It's always better to check the website using incognito mode.

How can I see the usage statistics?
Smartarget provides you statistics so you can see how many clicks were on the app, including the pages with most clicks, etc. You can find it all in your Smartarget Dashboard

I need support, how can I contact you?
You're welcome to contact us here: https://smartarget.online/page_contact.html
